Student Name : Andre Luis More Pangoni
Github Repo : https://github.com/andreeeeh/place-mark
Deployed 1 : https://place-mark.onrender.com/
Deployed 2 : _____

	Accounts	Placemark Features	API	Models	Deployment	Git
Level 1	Signup, Login, Name - implemented signup and login with user name fields. Tag: v1	Pub name, description, Location (lat,lng) - implemented pub registration Tag: v1	I implemented the first API routes and base app structure for user creation. Tag: v1	Mongo stores and model tests. Tag: v1, v2 and v3	I run and test locally on localhost during development. (README file for instructions)	I kept a continuous git history from the start (Image bellow).
Level 2	I implemented cookie-based auth and user settings flow. Tag: v1	Pub name, description, Location (lat,lng) - implemented pub registration Tag: v2	I added core unit tests. Tag: v2	Mongo stores and model tests. Tag: v1, v2 and v3	I prepared env for Render deployment. (image bellow)	README with setup and features.
Level 3	I implemented admin account seeding and role concept. Tag: v3	I implemented user list/remove and pub category filtering. Tag: v3	I implemented Swagger and API tests. Tag: v3	Mongo - implemented Mongo stores and model tests. Tag: v1, v2 and v3	I configured Mongo Atlas connection for persistence (images bellow).	I tagged release milestones (image bellow). Tags: v1, v2, v3 and v3
Level 4	*I implemented admin dashboard and simple analytics. Tag: v4*	*I implemented Cloudinary image upload and image display. Tag: v4*	*I implemented JWT auth in API and related tests. Tag: v1*	*I implemented optional Firebase store integration (image bellow). Tag: v4*		I kept a git flow with branches like main features and tasks (Image bellow).

Level 5	*The admin user can delete user as request, but they can also toggle their admin status*	*The user can select categories when creating a pub, but they can also filter the pub list by categories.*	*Users are able to edit and delete the pub entries that they create.*			

Additional notes:

There's and admin user pre-configured with seed to test all features:
Email: admin@admin.com
Password: admin

Grading Rubric

main feat: update README
v4 Merge pull request #16 from andreeeeh/feat/level-4
Merge pull request #15 from andreeeeh/task/firebase-firestore
feat: integrate Firebase as a data store
Merge pull request #13 from andreeeeh/task/images
feat: implement image upload functionality and integrate Cloudinary
Merge pull request #12 from andreeeeh/task/admin-analytics
feat: enhance settings view data analysis
v3 Merge pull request #11 from andreeeeh/feat/level-3
Merge pull request #10 from andreeeeh/task/open-api-and-swagger
feat: add pub API tests and fix user API and auth tests
feat: implement CRUD for Open API and Swagger
Merge pull request #9 from andreeeeh/task/admin-account-management
test: add test for update user and pub
feat: add mongoose seeder for admin user
feat: implement settings management with user admin
Merge pull request #7 from andreeeeh/task/categories
test: add tests for retrieving pubs by category
feat: enhance dashboard functionality with category filtering and author identification
v2 Merge pull request #6 from andreeeeh/feat/level-2
Merge pull request #5 from andreeeeh/task/dashboard-pub-crud
feat: add update functionality for pubs in model tests
feat: implement CRUD operations for pubs
test: add pub model tests
feat: add dashboard abd pub creation
v1 Merge pull request #2 from andreeeeh/feat/level-1
Merge pull request #1 from andreeeeh/task/signup-and-login
test: add user authentication tests and refactor user model structure
feat: initialize PlaceMark application with user authentication and API routes
Initial commit

	Accounts	*Placemark Features*	*API/Tests*	*Models*	*Deployment*	*Git*
Level 1	Signup / Login	Name	Basic API	Mem	Locahost	git + commit History
Level 2	Cookie Authentication/ User Settings	Description, Location (lat,lng)	Core unit Tests	JSON	Render	Structured readme
Level 3	Basic Admin Account List/Remove Users	Categories	Open API (Swagger) + tests	Mongo	Cloud Atlas	Tagged releases
Level 4	Admin Dashboard + analytics	Images	JWT + tests	Firebase	Amazon	Git Flow
Level 5	Propose 2 additional capabilities from the above categories
